Career Summary:

Experienced Software Engineer with over 5 years of expertise specializing in Fintech and Banking solutions. Proficient in PHP and the Laravel framework, with extensive experience in designing, developing, and maintaining scalable software solutions. Proven leadership skills with a strong focus on clean, maintainable code and driving team success.

Work Experience:

Software Specialist

Software Shop Limited (SSL Wireless)

Jan 01, 2022 to Present

- Lead the development and implementation of a Board Meeting Management Solution for a major bank, enhancing the efficiency and organization of executive meetings.
- Engaged in regular code reviews to uphold high-quality, maintainable, and scalable coding practices.
- Maintained and developed new features for the Indian Visa Application payment solution hosted on AWS.
- Designed and developed APIs for push-pull SMS services for a bank.
- Developed and managed the Over The Counter (OTC) system, utilized by over 15 banks, facilitating bill and fee payments for more than 20 utility companies, including NESCO, DPDC, BTCL, WASA, TITAS, and DESCO.
- Designed and developed APIs for integrating Mobile Wallet and Core Banking Systems, enabling features like add money and fund transfer.
- Developed LinkQR payment solutions for a renowned bank.
- Built a microsite using Shohoz API for a bus ticketing service with Payment Gateway integration.
- Managed incoming bank support requests and resolved technical issues efficiently.

Software Associate

Software Shop Limited (SSL Wireless)

Feb 02, 2019 to Dec 2021

- Designed and developed a Human Resource Telegram Chatbot system using Python to provide efficient access to HRIS features, including attendance, employee information, HR data, leave details, and blood search functionality.
- Developed and maintained the NGTE Welfare Trust System using Laravel, enabling non-government teachers to submit information and documentation for post-retirement benefits.
